

Integration Of Care In Ambulatory Care Settings

Ofiong Okon, FNP

Medical Director of Mobile Vans Health Center

Integration of care is a concept that underline the necessity of coordinated and comprehensive medical care provided by an organized clinical system in order to deliver beneficial outcomes to individual patients.

Integration of care...

- ...fosters patient – provider relationship
- ...increases patient satisfaction and overall wellness.
- ...results in a comprehensive provision of services.
- ...promotes patient's engagement.
- ...produces better clinical outcomes
- ...minimizes time spent at the clinic
- ...is cost effective

Conclusions

Clinical outcomes are optimized when the clinical team is integrated from the start.

A good Integrated Model includes the entire team rendering services at the clinic, from the Custodian to the Center Director. They all have interactions with the patient.

Patients are less likely to drop from their care when you have an integrated staff doing the follow up.

Conclusion 4

Thank you
