---

## **3** Reporting: Summary & Detail

---

## **4** Family Planning Measures

---

*\*All data contained in this presentation is demo data.*

# Module Overview

An overview of the OB module in DRVS.

# Module Overview

- The OB module offers many benefits for managing prenatal patients.
  - ✓ Pre-visit planning for prenatal patients.
  - ✓ Pre-visit planning for postnatal patients.
  - ✓ Reports to allow care teams to deliver more informed care in an efficient manner.
  - ✓ Reports to allow care teams to perform outreach and track patients by trimester to ensure patients are on track for care.

# What's Included?

## Prenatal Passport (PNP)

- Summarizes prenatal care for a single patient
- Identifies recommended screenings by trimester

## Pregnancy Episode Reports

- **Summary:** Contains data identifying the start and end date of pregnancy episodes
- **Details:** Tracks key screenings

# Prenatal Passport (PNP)

Pre-visit planning tool for prenatal and postnatal patients.

The screenshot displays the Prenatal Passport (PNP) interface for a patient named Diane Granger. The interface is organized into several sections:

- Patient Information:** Includes the patient's name, DOB (8/15/1975), EDD (6/25/2020), Gestational Week (31, 0), and other identifiers.
- Prenatal History:** A table listing prenatal visits with columns for Date, Weight, Blood Pressure, Fetal Heart Rate, and other metrics.
- Vitals:** A section showing current vital signs: Weight 130.3 lbs, BP 130/80 mmHg, and HR 85 bpm.
- Prenatal Screenings:** A section for tracking various prenatal tests, including Rh Factor, AFP, and others.
- Medications:** A list of medications taken during pregnancy, such as Amoxicillin, Ibuprofen, and Prenatal Vitamins.
- Appointments:** A section for scheduling and tracking appointments.

# Uses for the Prenatal Passport

- Improve patient care by anticipating patient needs.
  - Prepare for prenatal *and* postnatal patient visits.
    - Filter the pre-visit planning report to pregnant patients or to your OB provider group.
    - Navigate from the pre-visit planning report to the prenatal passport.
  - Coordinate care in care team planning meetings or case conferences.

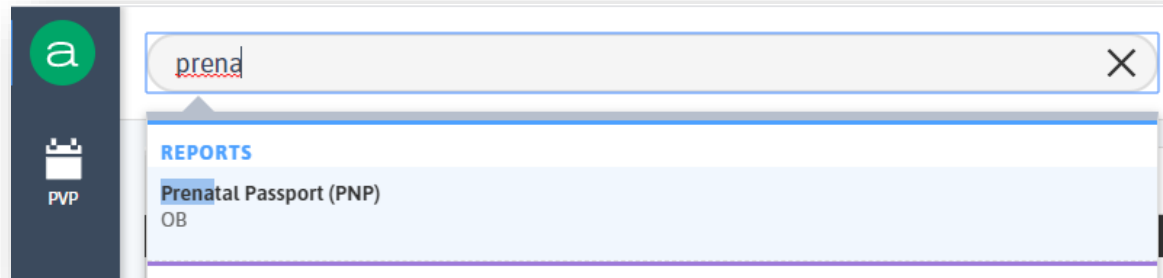

# Navigating to the PNP

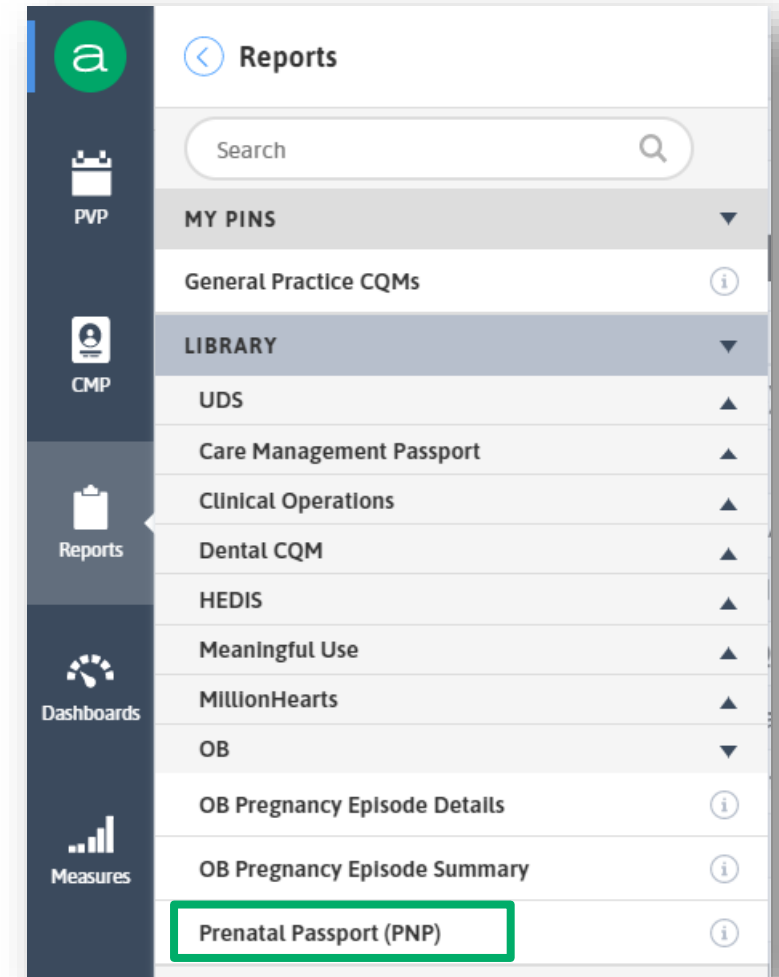

- The PNP can be accessed in three ways.

- Global Search:

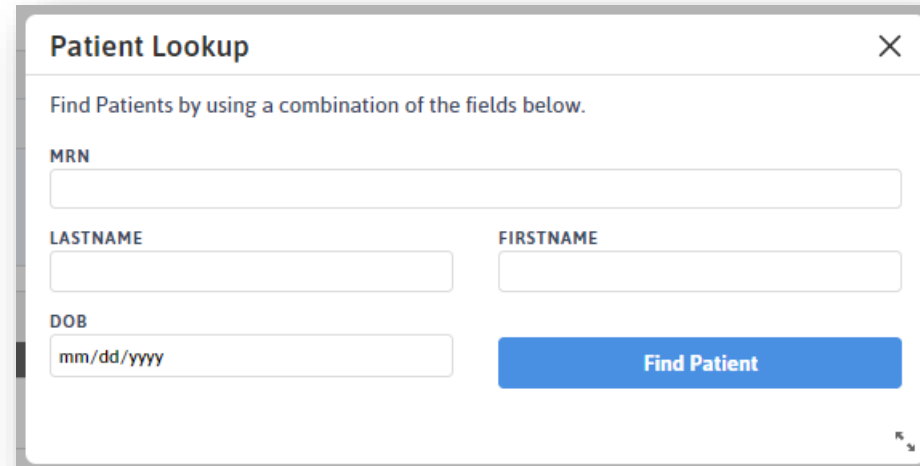

- Reports > OB > Prenatal Passport (PNP)

- From a pregnant patient's visit planning report

# Lookup a Patient

- From the prenatal passport, you can lookup a patient by entering any of the following patient details in the search box:
  - MRN
  - Last Name
  - First Name
  - Date of Birth

A screenshot of a 'Patient Lookup' dialog box. The dialog has a title bar with a close button (X). Below the title bar, it says 'Find Patients by using a combination of the fields below.' There are four input fields: 'MRN' (a single line), 'LASTNAME' (a single line), 'FIRSTNAME' (a single line), and 'DOB' (a single line with a placeholder 'mm/dd/yyyy'). A blue button labeled 'Find Patient' is located at the bottom right of the form area.

Patient Lookup

Allergies,  
Appts**

# PNP | Vitals

- Displays the most recent weight and blood pressure.
- The dots on the trend line correspond to the prenatal visits from the flowsheet section. Hovering over the dot displays the date and result for that visit

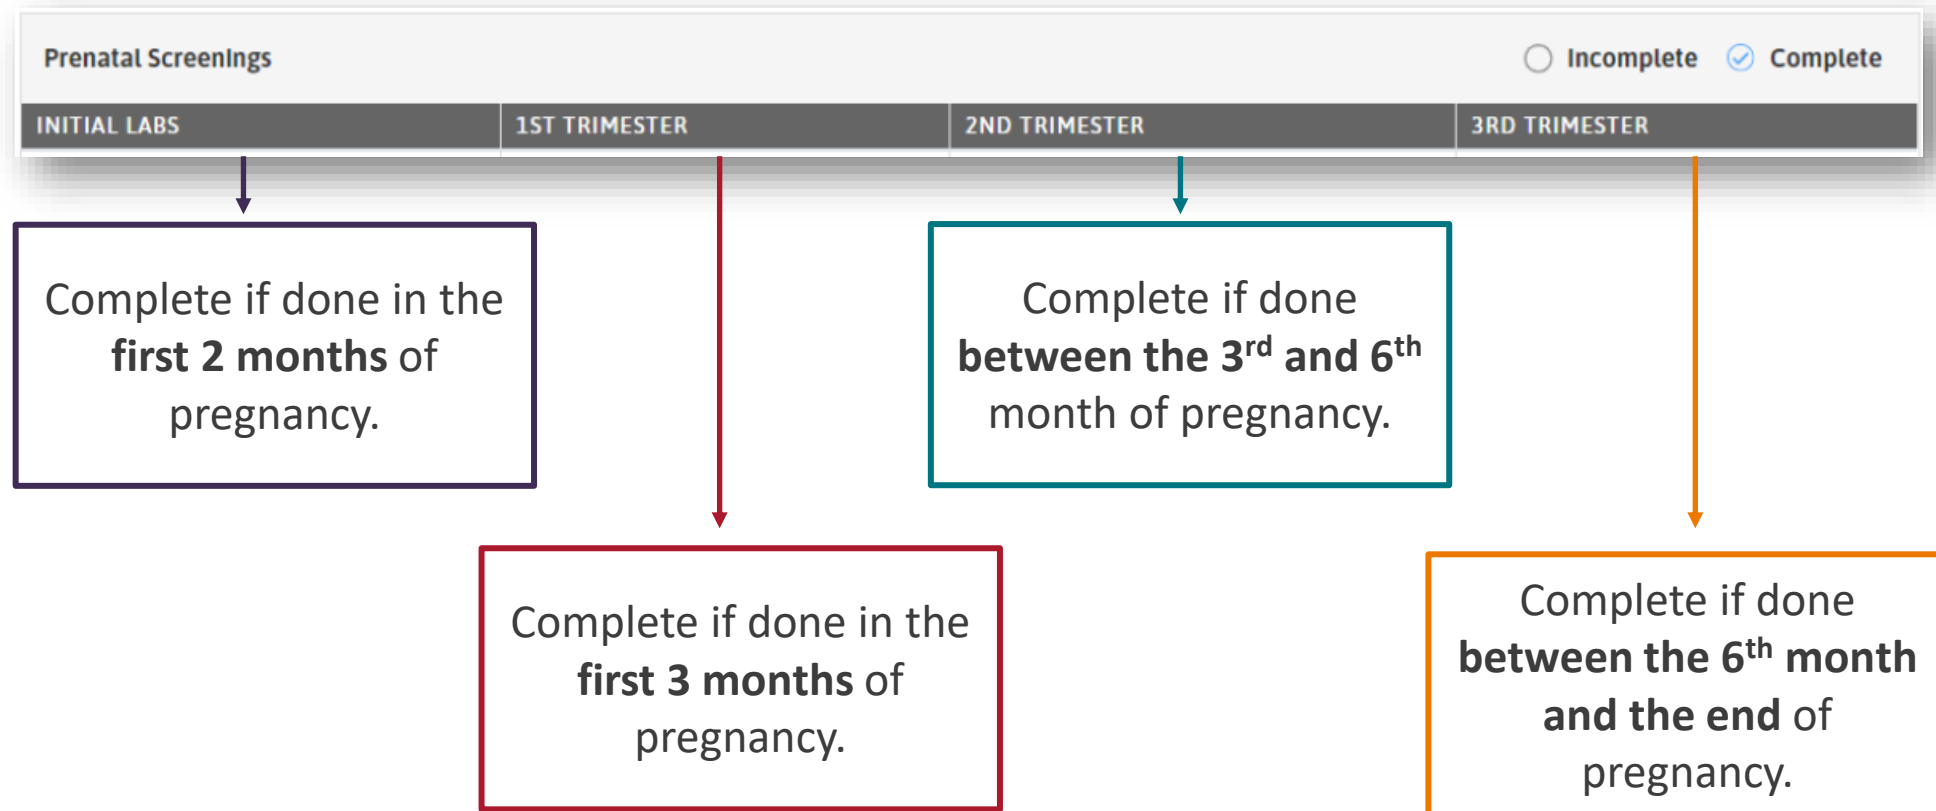

# PNP | Screenings Overview

- Checklist feature to identify completion of standard screenings organized by trimester.

Prenatal Screenings				<input type="radio"/> Incomplete	<input checked="" type="radio"/> Complete
INITIAL LABS	1ST TRIMESTER	2ND TRIMESTER	3RD TRIMESTER		
<input checked="" type="checkbox"/> Rubella	<input type="radio"/> HgB	<input type="radio"/> GCT	<input type="radio"/> GBS		
<input checked="" type="checkbox"/> Ab Scr	<input checked="" type="checkbox"/> US Init	<input checked="" type="checkbox"/> HCT	<input checked="" type="checkbox"/> TDAP		
<input checked="" type="checkbox"/> STD Scr	<input type="radio"/> HCT	<input type="radio"/> Rhogam	<input checked="" type="checkbox"/> HgB		
<input type="radio"/> HCT	<input checked="" type="checkbox"/> MMM	<input checked="" type="checkbox"/> US Anomaly	<input checked="" type="checkbox"/> HCT		
<input checked="" type="checkbox"/> HBsAg		<input checked="" type="checkbox"/> HgB	<input type="radio"/> STD Scr		
<input type="radio"/> CF Screen					
<input type="radio"/> HgB					
<input checked="" type="checkbox"/> Rh Type					
<input checked="" type="checkbox"/> Blood Type					
<input checked="" type="checkbox"/> Pap					

# PNP | Screenings Data

- The completion of a screening is based on a record of a lab or screening documented in the EHR within the trimester indicated.

- If a screening is documented after a trimester ends, the screening will be marked as complete.
  - For example, if the second trimester Rhogam is not completed in the second trimester, but is instead completed in the third trimester, the Rhogam check box under the second trimester section will update to complete when it is completed in the third trimester.

# Reports: Summary & Detail

Pregnancy reporting in the OB Module.

# Uses for Summary and Details Reports

- Population health management
- Case conferences
- Outreach
  - Due soon, no upcoming appointment
  - Overdue, no upcoming appointment
  - Appointment reminders and preparedness
  - Trimester specific
- Data collection for UDS

# Navigating to the Reports

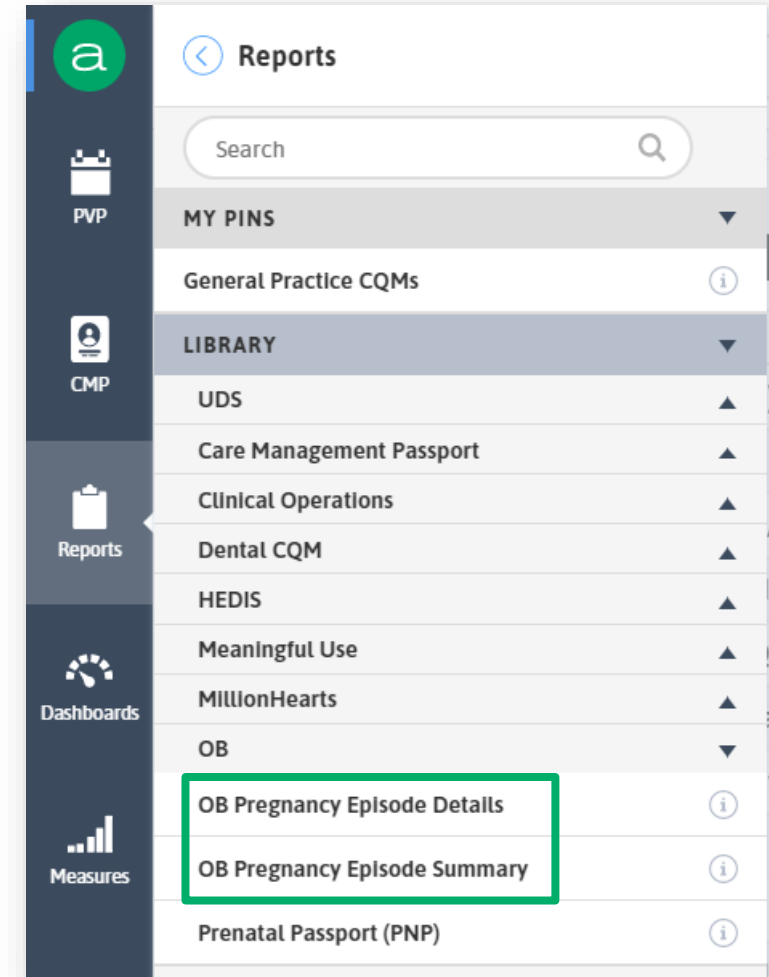

- The reports can be found in two ways.

- Global Search:

- Reports > OB

- OB Pregnancy Episode Details
- OB Pregnancy Episode Summary

# Summary vs. Details

Feature	OB Pregnancy Episode Summary	OB Pregnancy Episode Details
Included with DRVS subscription	✓	
Included with DRVS subscription and OB Module	✓	✓
Column for Entry into Prenatal Program	✓	✓
Column for Initial Trimester, Here	✓	✓
Level of data detail for patient's pregnancy episode	Summary	Detail

- *Entry into Prenatal Program* and *Initial Trimester, Here* data must be mapped in the Structured Clinical Data category in mapping admin.
- Entry into Prenatal Program mapping also populates the CHC OB Filter on UDS table 6b – sections A & B and table 7.

# Keep in Mind...

- Both reports will show any patient whose pregnancy overlaps the date range set on the report, regardless of whether that patient had a qualifying encounter in that time period. Depending on the date range set, the reports will not necessarily display the same numbers as Table 6b - Sections A & B or Table 7.
- The values in the *Pregnancy End Date* column in the summary report are the same as the Estimated Dates of Delivery until an actual outcome is recorded. If no outcome is recorded by the EDD date, 1 day will be added to the EDD for 28 days, after which DRVS will consider the episode of pregnancy ended even if no outcome has been recorded. For more information on how pregnancy episodes and data elements are calculated, see the Help section [here](#)

# OB Pregnancy Episode Summary | Data Elements

This report displays in a registry format. It contains patient demographics as well as:

- ✓ OB risk level
- ✓ Episode start
- ✓ Episode indicator date and code
- ✓ Trimester
- ✓ Gestational age (weeks)
- ✓ Estimated date of conception
- ✓ Last menstrual period
- ✓ Episode create date
- ✓ Episode type
- ✓ Early entry into prenatal program date
- ✓ Estimated delivery
- ✓ Birthweight
- ✓ Delivery documentation
- ✓ Birthing outcome
- ✓ Risk
- ✓ Initial trimester of entry
- ✓ Initial trimester of care location

# Contraceptive Counseling

*This measure is the percentage of female patients that received documented counseling during a qualifying encounter at least once during the past 12 months. Current best practice is to provide patients of reproductive age with contraceptive counseling once per year, and this measure reflects whether counseling is being provided according to those guidelines. There is a 12-month lookback period in this measure in which the logic scans all encounters in the past 12 months to determine whether or not contraceptive counseling was provided to the patient.*

# Access to LARC (NQF #2904), LARC Services

Percentage of women aged 15-44 years at risk of unintended pregnancy that is provided a long-acting reversible method of contraception (i.e., implants, intrauterine devices or systems (IUD/IUS). It is an access measure because it is intended to identify situations in which women do not have access to the long-acting reversible methods of contraception (LARC), i.e., contraceptive implants and intrauterine devices.

CMS/NQF #	Numerator	Denominator	Exclusions
<b>NQF #:</b> 2904 <b>CMS ID:</b> NA <b>Endorser:</b> NQF <b>Steward:</b> US Office of Population Affairs	Women aged 15-44 years of age at risk of unintended pregnancy who were provided a long-acting reversible method of contraception (LARC), i.e., intrauterine device or implant.  Long Acting Reversible Contraceptive (LARC) ICD, CPT, and HCPCS procedure codes, and RxNorm drug codes indicating placement or surveillance of an implant or IUD in the previous 12 months.	All women aged 15-44 years of age who are at risk of unintended pregnancy. <ul style="list-style-type: none"><li>Qualifying encounter</li><li>Female patients ages 15 - 44 by December 31 of the calendar year</li></ul>	<ul style="list-style-type: none"><li>Patients infecund due to non-contraceptive reasons including menopause, hysterectomy, or oophorectomy.</li><li>Had a live birth within 60 days of the end of the filtered period.</li><li>Were pregnant at the end of the measurement year.</li></ul>

# Access to LARC (NQF #2904), LARC Services

## NUMERATOR

Women aged 15-44 years of age at risk of unintended pregnancy who were provided a long-acting reversible method of contraception (LARC), i.e., intrauterine device or implant.

Long Acting Reversible Contraceptive (LARC) ICD, CPT, and HCPCS procedure codes, and RxNorm drug codes indicating placement or surveillance of an implant or IUD in the previous 12 months.

LARC

CPT, HCPCS, ICD-10,  
RxNorm or SNOMED  
codes indicating provision  
of LARC

## DENOMINATOR

All women aged 15-44 years of age who are at risk of unintended pregnancy.

- Qualifying encounter
- Female patients ages 15 - 44 by December 31 of the calendar year

QUALIFYING  
PATIENT

Include female  
patients 15-44

Qualifying Encounter as  
defined by health center in  
Mapping Administration in  
DRVS

## EXCLUSIONS

- Patients infecund due to non-contraceptive reasons, including: menopause, hysterectomy, or oophorectomy.
- Had a live birth within 60 days of the end of the filtered period.
- Were pregnant at the end of the measurement year.
